INSTALLATION

Water is supplied in a low pressure system maximum 3.5 meters water height from a water tank via plastic 20mm pipe to drinkers. Generally a separate tank is designed for 200-500 litres capacity and is provided for each poultry shed.

This is also effectively used for distribution of Medications. 20mm Tee is provided on the pipe line where Drinkers is needed. Give extension as shown in the diagram and provide 1/2" Female adapter. This is essential for reducing damage from rats to soft PVC Hose. Clean female adapter by giving inside taper at the edge to prevent damage to "O" ring. The connector nipple is supplied with the drinker. The pipe line is fixed to truss.

The Drinkers are suspended by the cord provided, directly from the top.
